

DESCRIPTION

This is the electric heating and subsequent maintenance of a constant temperature in pipes, tanks, instruments, hoppers, etc. Highlighting, among others, the following advantages:

- Safety and operational reliability
- More uniform and controlled temperatures
- Lower installation, operation and maintenance costs
- Ecological and energy saving system
- Easy application and installation
- Control via thermostats as required

HUMAN CAPABILITY

ElectroRayma S.L. has an engineering department for the design, study and supervision; designing the tracing system best suited to your facility and specialists with extensive experience.
